Preface	v	6.2 Study Design and Errors	93
Acknowledgments	vii	6.3 Data Analysis	98
1 Primer on Molecular Genetics	1	7 Genotyping Methods and Errors	105
1.1 Genetic Variation	1	7.1 Genotyping Principles	105
1.2 The Human Genome	13	7.2 Genotyping and PCR	105
1.3 Consequences of Genetic Variation	17	7.3 Choice of Genotyping Method	110
1.4 Genetic Nomenclature	22	7.4 Sources of DNA for Genotyping	113
2 Primer on Medical Genetics	25	7.5 Genotyping Errors	114
2.1 The Location of Disease-causing Mutations	25	7.6 Imputing Genotypes	119
2.2 Single-Gene, Oligogenic, and Multigenic Disorders	28	8 Candidate Gene Studies and Genome-Wide Association Studies	123
2.3 Copy Number of Mutant Genes	32	8.1 Candidate Genes	123
2.4 Inherited Mutations	35	8.2 Candidate Variants	125
3 Primer on Population Genetics	41	8.3 Candidate Gene Studies in the GWAS age	130
3.1 Hardy–Weinberg Equilibrium	41	8.4 Advantages and Disadvantages of a GWAS	132
3.2 Linkage Disequilibrium	45	9 Statistical Analysis of Genetic Association Study Results	139
3.3 Population Substructure	52	9.1 Standard Genetic Association Analysis	139
3.4 Signatures of Natural Selection	54	9.2 GWAS Analysis	152
4 Epidemiologic Principles and Genetic Association Studies	57	10 Bioinformatics for the Interpretation of Genetic Association Study Results	163
4.1 Types of Epidemiologic Association Studies	57	10.1 Bioinformatics for Testing SNP Associations	163
4.2 Chance, Bias, Confounding, and Effect Modification	64	10.2 Functional Annotation of SNPs	168
4.3 Causality and Statistical Association	71	10.3 Analyzing Functionally Altered Genes	181
5 Environmental Epidemiology in the Context of Genetic Epidemiology	75	11 Genetic Risk Profiling and Medical Applications of Genetic Associations	187
5.1 Studying Environmental Effects	76	11.1 Genetic Risk Profiling and Genetic Markers	187
5.2 Examining and Estimating Environmental Effects	78	11.2 Assessing Clinical Utility	192
5.3 The Environment and Gene Activity	83	11.3 Disease Biology and Pharmacogenomics	196
5.4 Gene and Environment Interactions, Personalized Prevention, and Treatment	84	Glossary	201
6 Elementary Statistical Concepts	89	Index	219
6.1 Statistical Power and Statistical Significance	90
