

Contents

Chapter 1: Biological Systems	1		
Reductionism and Systems Biology	5		
Even Simple Systems Can Confuse Us	8		
Why Now?	10		
Communicating Systems Biology	13		
The Task Before Us	16		
Exercises	17		
References	17		
Further Reading	18		
Chapter 2: Introduction to Mathematical Modeling	19		
Goals, Inputs, and Initial Exploration	24		
2.1 Questions of Scale	24		
2.2 Data Availability	25		
Model Selection and Design	26		
2.3 Model Structure	27		
2.4 System Components	30		
2.5 Model Equations	35		
2.6 Parameter Estimation	36		
Model Analysis and Diagnosis	37		
2.7 Consistency and Robustness	38		
2.8 Exploration and Validation of Dynamical Features	40		
Model Use and Applications	43		
2.9 Model Extensions and Refinements	43		
2.10 Large-Scale Model Assessments	45		
2.11 Questions of Design	46		
2.12 Simplicity versus Complexity	47		
Exercises	49		
References	50		
Further Reading	50		
Chapter 3: Static Network Models	51		
Strategies of Analysis	52		
Interaction Graphs	53		
3.1 Properties of Graphs	54		
3.2 Small-World Networks	58		
Dependencies Among Network Components	62		
3.3 Causality Analysis	62		
3.4 Mutual Information	62		
Bayesian Reconstruction of Interaction Networks	63		
3.5 Application to Signaling Networks	66		
3.6 Applications to Other Biological Networks	69		
Static Metabolic Networks and Their Analysis	69		
3.7 Stoichiometric Networks	70		
3.8 Variants of Stoichiometric Analysis	73		
3.9 Metabolic Network Reconstruction	73		
3.10 Metabolic Control Analysis	74		
Exercises	78		
References	80		
Further Reading	82		
Chapter 4: The Mathematics of Biological Systems	83		
Discrete Linear Systems Models	85		
4.1 Recursive Deterministic Models	85		
4.2 Recursive Stochastic Models	88		
Discrete Nonlinear Systems	91		
Continuous Linear Systems	93		
4.3 Linear Differential Equations	94		
4.4 Linearized Models	95		
Continuous Nonlinear Systems	100		
4.5 Ad hoc Models	101		
4.6 Canonical Models	102		
4.7 More Complicated Dynamical Systems Descriptions	110		
Standard Analyses of Biological Systems Models	110		
4.8 Steady-State Analysis	110		
4.9 Stability Analysis	115		
4.10 Parameter Sensitivity	118		

4.11 Analysis of Systems Dynamics	119	6.13 Transcription Factors	188
Other Attractors	122	6.14 Models of Gene Regulation	190
4.12 Limit Cycles	123	Measuring Gene Expression	191
4.13 Chaotic Attractors	126	Localization of Gene Expression	194
Exercises	128	Outlook	196
References	132	Exercises	196
Further Reading	133	References	198
		Further Reading	200
Chapter 5: Parameter Estimation	135	Chapter 7: Protein Systems	201
Parameter Estimation for Linear Systems	136	Chemical and Physical Features of Proteins	202
5.1 Linear Regression Involving a Single Variable	136	7.1 Experimental Protein Structure Determination and Visualization	206
5.2 Linear Regression Involving Several Variables	138	An Incomplete Survey of the Roles and Functions of Proteins	208
Parameter Estimation for Nonlinear Systems	141	7.2 Enzymes	209
5.3 Comprehensive Grid Search	143	7.3 Transporters and Carriers	211
5.4 Nonlinear Regression	145	7.4 Signaling and Messenger Proteins	214
5.5 Genetic Algorithms	146	7.5 Proteins of the Immune System	215
5.6 Other Stochastic Algorithms	148	7.6 Structure Proteins	216
5.7 Typical Challenges	149	Current Challenges in Protein Research	218
Parameter Estimation for Systems of Differential Equations	153	7.7 Proteomics	218
Structure Identification	160	7.8 Structure and Function Prediction	220
Exercises	161	7.9 Localization	222
References	166	7.10 Protein Activity and Dynamics	224
Further Reading	167	Exercises	226
		References	228
Chapter 6: Gene Systems	169	Further Reading	230
The Central Dogma	169	Chapter 8: Metabolic Systems	231
Key Properties of DNA and RNA	171	Biochemical Reactions	232
6.1 Chemical and Physical Features	171	8.1 Background	232
6.2 Size and Organization of DNA	174	8.2 Mathematical Formulation of Elementary Reactions	234
6.3 Genes and Noncoding DNA	175	8.3 Rate Laws	235
6.4 Eukaryotic DNA Packing	178	Pathways and Pathway Systems	240
6.5 Epigenetics	178	8.4 Biochemistry and Metabolomics	240
RNA	178	8.5 Resources for Computational Pathway Analysis	241
6.6 Messenger RNA (mRNA)	179	8.6 Control of Pathway Systems	244
6.7 Transfer RNA (tRNA)	182	Methods of Metabolomic Data Generation	246
6.8 Ribosomal RNA (rRNA)	182	8.7 Sampling, Extraction, and Separation Methods	247
6.9 Small RNAs	183	8.8 Detection Methods	247
6.10 RNA Viruses	184	8.9 Flux Analysis	249
Gene Regulation	185		
6.11 The <i>lac</i> Operon	186		
6.12 Modes of Regulation	187		

From Data to Systems Models 250

8.10 Case Study 1: Analyzing Metabolism in an Incompletely Characterized Organism 250

8.11 Case Study 2: Metabolic Network Analysis 251

8.12 Case Study 3: Extraction of Dynamic Models from Experimental Data 251

Exercises 252

References 254

Further Reading 255

Chapter 9: Signaling Systems 257

Static Models of Signal Transduction Networks 259

9.1 Boolean Networks 259

9.2 Network Inference 261

Signal Transduction Systems Modeled with Differential Equations 261

9.3 Bistability and Hysteresis 261

9.4 Two-Component Signaling Systems 266

9.5 Mitogen-Activated Protein Kinase Cascades 270

9.6 Adaptation 273

9.7 Other Signaling Systems 274

Exercises 278

References 279

Further reading 281

Chapter 10: Population Systems 283

Population Growth 283

10.1 Traditional Models of Population Growth 284

10.2 More Complex Growth Phenomena 286

Population Dynamics Under External Perturbations 288

Analysis of Subpopulations 289

Interacting Populations 292

10.3 General Modeling Strategy 292

10.4 Phase-Plane Analysis 292

10.5 More Complex Models of Population Dynamics 297

Exercises 299

References 301

Further reading 302

Chapter 11: Integrative Analysis of Genome, Protein, and Metabolite Data: A Case Study in Yeast 303

On the Origin of Models 304

A Brief Review of the Heat Stress Response in Yeast 306

11.1 The Trehalose Cycle 308

Modeling Analysis of the Trehalose Cycle 310

11.2 Design and Diagnosis of a Metabolic Pathway Model 310

11.3 Analysis of Heat Stress 312

11.4 Accounting for Glucose Dynamics 314

11.5 Gene Expression 315

Multiscale Analysis 318

11.6 *In Vivo* NMR Profiles 318

11.7 Multiscale Model Design 320

11.8 The Trehalase Puzzle 324

Concluding Comments 327

Exercises 328

Chapter 12: Physiological Modeling: The Heart as an Example 331

Hierarchy of Scales and Modeling Approaches 332

12.1 Basics of Heart Anatomy 333

12.2 Modeling Targets at the Organ Level 334

12.3 Modeling Targets at the Tissue Level 335

12.4 Modeling Targets at the Cell Level 337

Simple Models of Oscillations 339

12.5 Black-Box Models of Oscillations 339

12.6 Summary of Black-Box Oscillation Models 342

12.7 From a Black Box to Meaningful Models 343

Electrochemistry in Cardiomyocytes 345

12.8 Biophysical Description of Electrochemical Processes at the Membrane of Cardiomyocytes 347

12.9 Resting Potentials and Action Potentials 348

12.10 Models of Action Potentials 350

12.11 Repeated Heartbeats 354

Issues of a Failing Heart 355

12.12 Modeling Heart Function and Failure Based on Molecular Events	356	14.3 Design Principles	404
Outlook for Physiological Multiscale Modeling	361	14.4 Operating Principles	406
Exercises	362	Goal-Oriented Manipulations and Synthetic Design of Biological Systems	407
References	365	14.5 Metabolic Engineering	407
Further Reading	366	14.6 Synthetic Biology	408
Chapter 13: Systems Biology in Medicine and Drug Development	369	Case Studies of Synthetic Biological Systems Designs	411
Are you Unique?	369	14.7 Elementary Mode Analysis in Metabolic Engineering	411
13.1 Biological Variability and Disease	369	14.8 Drug Development	414
13.2 Modeling Variability and Disease	370	14.9 Gene Circuits	415
Personalized Medicine and Predictive Health	372	The Future Has Begun	419
13.3 Data Needs and Biomarkers	373	Exercises	419
13.4 Personalizing Mathematical Models	374	References	421
The Drug Development Process	378	Further Reading	423
The Role of Systems Biology in Drug Development	380	Chapter 15: Emerging Topics in Systems Biology	425
13.5 Computational Target and Lead Identification	381	Emerging Applications	426
13.6 Receptor Dynamics	382	15.1 From Neurons to Brains	426
13.7 Pharmacokinetic Modeling	385	15.2 Complex Diseases, Inflammation, and Trauma	428
13.8 Pathway Screening with Dynamic Models	390	15.3 Organisms and their Interactions with the Environment	432
13.9 Emerging Roles of Systems Biology in Drug Development	393	Modeling Needs	435
Exercises	394	15.4 Multiscale Modeling	436
